

Enterprise GIS Dataset Stewardship

Archiving & Maintenance Plan

Dataset: i08_SoilsTestData_Initial.gdb

Primary Steward: Karen Tolentino

Primary Steward Division/Office/Program: FESSRO/Special Investigation/GIS and Remote Sensing

The frequency of archiving depends on the updates made to the feature classes. Older versions of the feature classes will be stored with a date included in the filename. The date will be in YYYYMMDD format and will pertain to the date the feature class was last updated.

The primary steward will update the metadata if any of the following is changed:

- Contact information
- Positional and attribute accuracy
- Data Model – fields, domains, related tables

EGC will be involved in reevaluating the datasets only if the data model has changed or the primary steward is replaced.
